2. Citations and explanations

Reference is made to the following document:

D1: DE 43 40 061 A.

- Document D1, which is considered the closest prior art, discloses a control plate for an axial piston machine according to the preamble of claim 1.

The features of the characterizing part of claim 1 are novel and consequently claim 1 meets the requirements for novelty of PCT Article 33(2).

- The control plate according to claim 1 differs from that of document D1 in that the radially inner edge (47) of the control plate (20) is in the form of a centering surface (29) which centres the control plate (20) on a centering body (7) situated on the housing side, and in that the centering surface (29) consists of several part surfaces (29.1, 29.2, 29.3), which are embodied on segments (43.1, 43.2, 43.3) of the inner edge (47) of the control plate (20) which extend radially inward into the passage (38) and are separated by recesses (36.1, 36.2, 36.3).

The problem to be solved by the invention is that of simplifying the processing of the control plate and reducing component weight. There was no reason for a person skilled in the art to redesign the passage in the control plate of an axial piston machine of the kind in question so as to permit the centering of the control plate along its inner edge.

Consequently, the subject matter of claim 1 involves an inventive step (PCT Article 33(3)).

3. Independent claim 8 discloses an axial piston machine having a control plate according to claim 1. As a result, the subject matter of claim 8 is novel and inventive.
4. Claims 2-7 and 9-14 are dependent on claims 1 and 8 and therefore likewise meet the PCT requirements for novelty and inventive step.
